RHEA-Simulation

# Precision spray application system

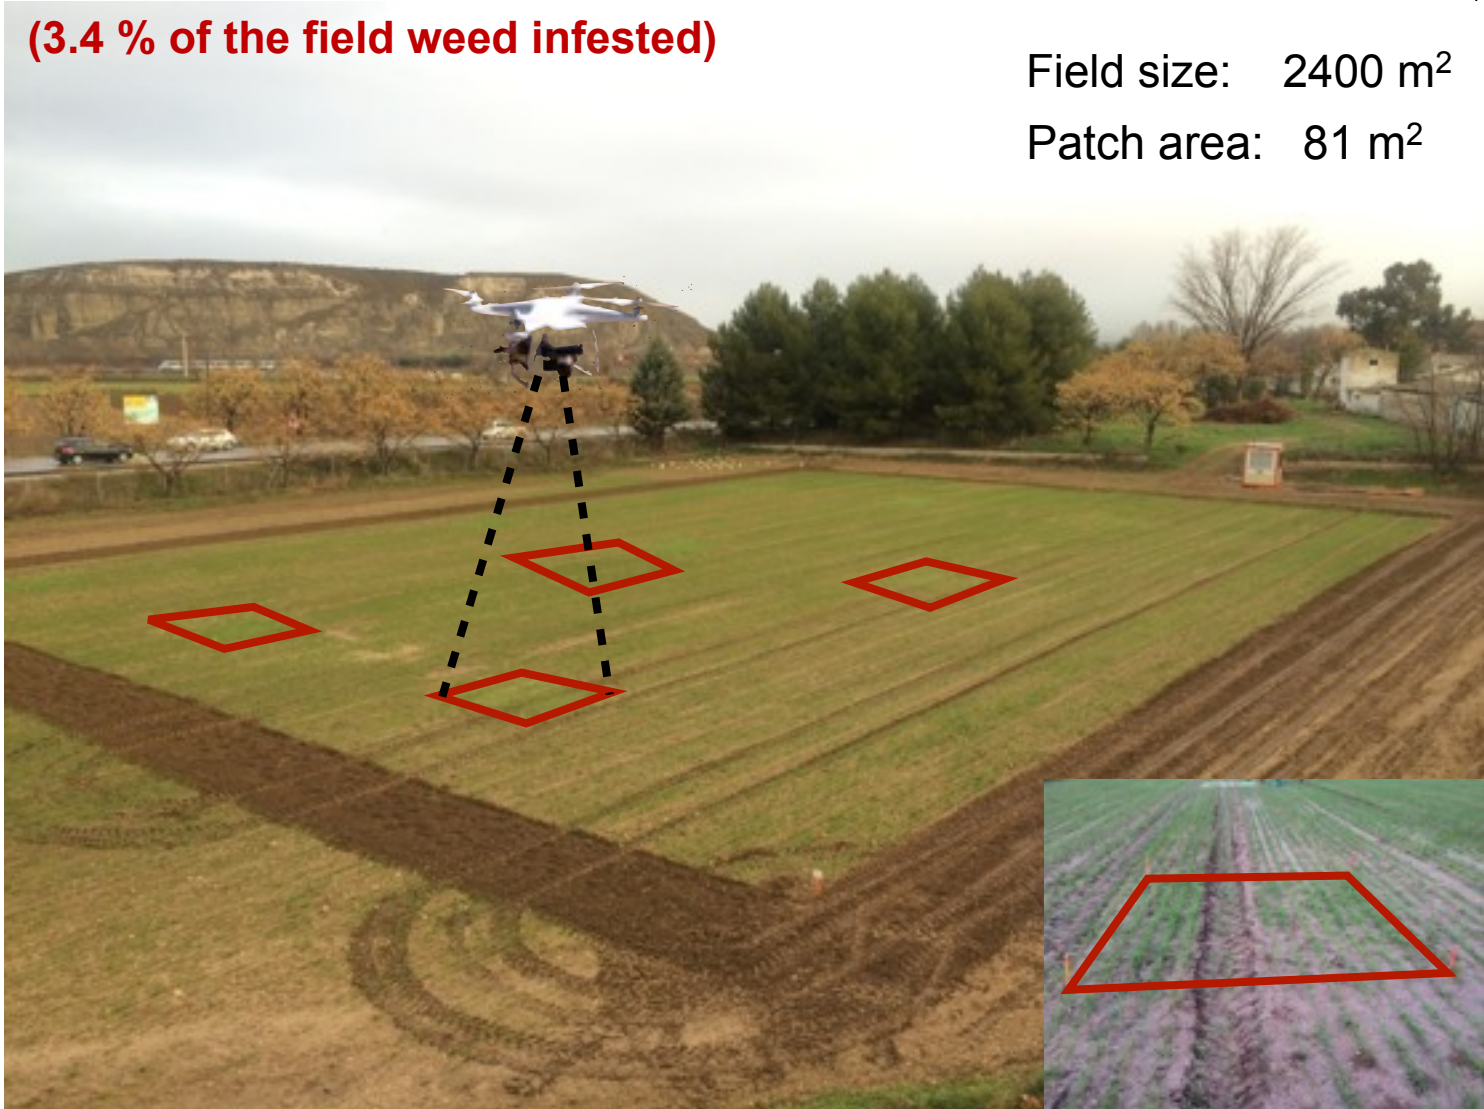

## UAV weed detection

**(3.4 % of the field weed infested)**

Field size: 2400 m<sup>2</sup>

Patch area: 81 m<sup>2</sup>

# Precision spray application system

## Autonomous tractor

# Precision spray application system

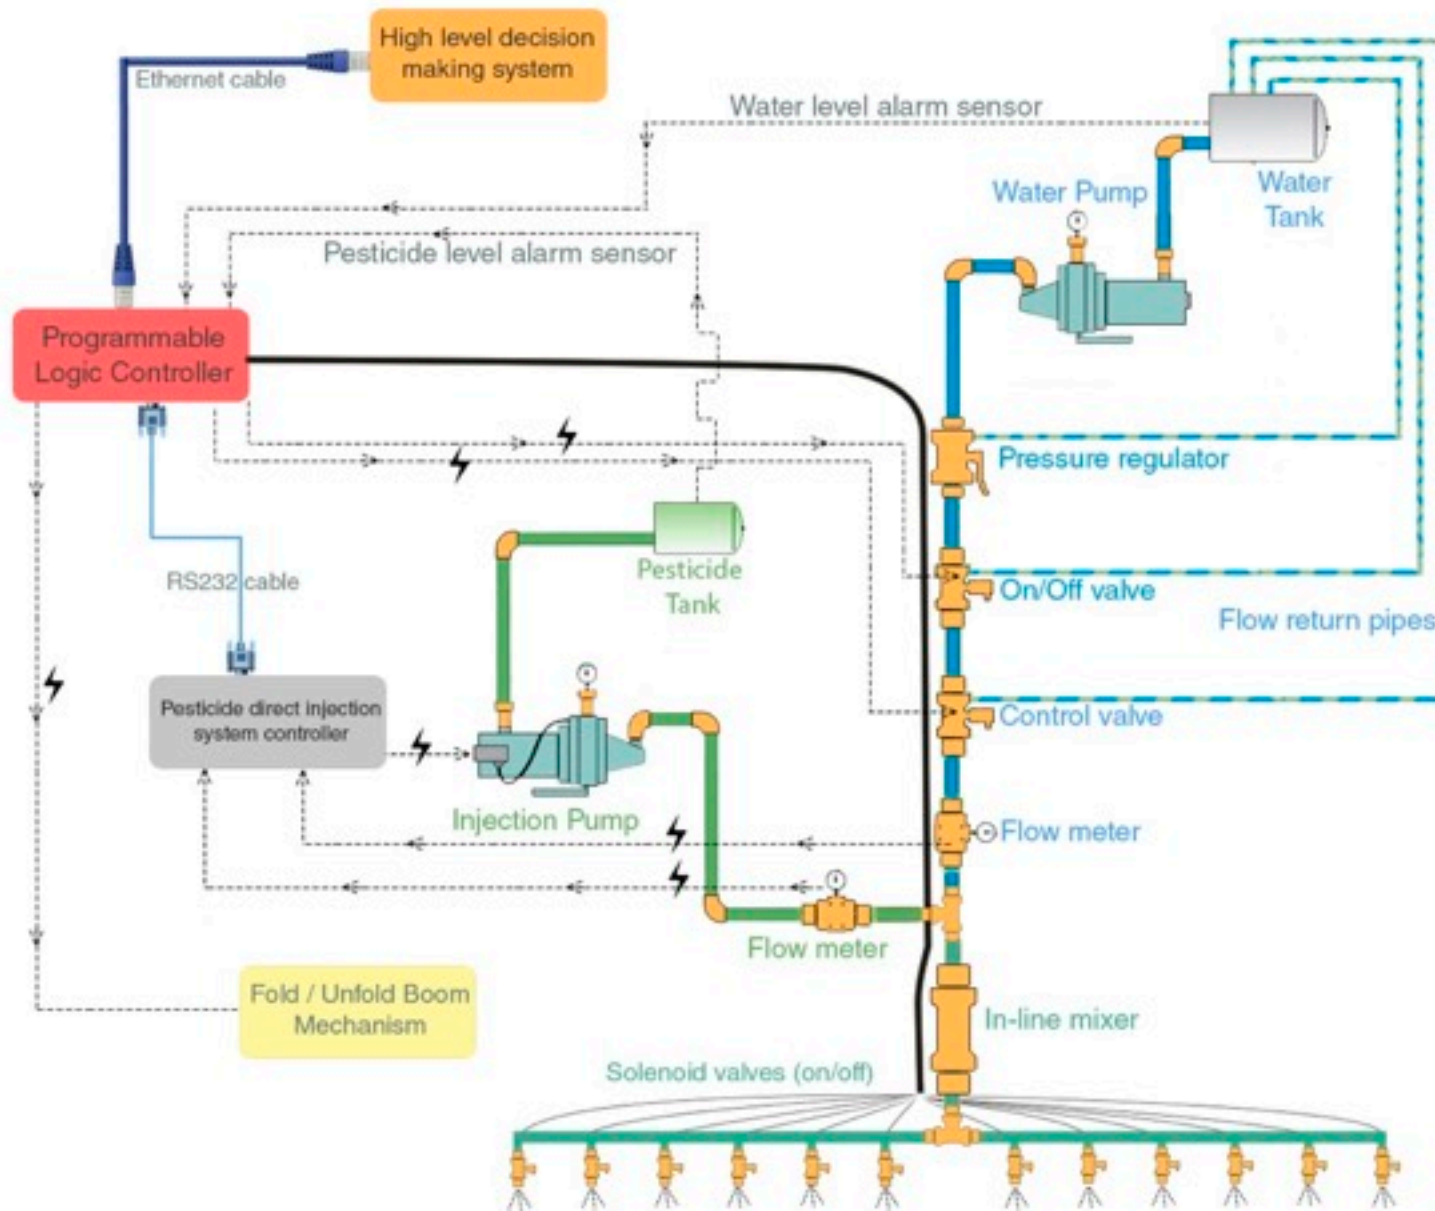

## Intelligent sprayer

# Precision spray application system

# Precision spray application system

# GNSS-based mechanized weed control

Three weed control zones have been defined in relationship to the crop plant

# GNSS-based mechanized weed control

RTK-GPS antenna

*Sun et al., 2010*  
*Perez-Ruiz et al., 2012*

.....  
 $(X_i, Y_i)$   
Mean total error 2 cm

# Crop geoposition map

# Odometry- based mechanized weed control

➡ Operator enters plant spacing and the size of the safety zone

# Odometry- based mechanized weed control

➡ Low cost (\$30) controller monitors the odometer during cultivation

# Odometry- based mechanized weed control

➡ At the safety zone, the controller opens the knives

# Odometry- based mechanized weed control

➡ Closing the knives as it passes the plant

# Odometry- based mechanized weed control

➡ The pattern repeats, without operator intervention

# Odometry- based mechanized weed control

➡ Periodically, the operator can shift the pattern, if needed

Shift wheel

Pattern Shift

# Odometry- based mechanized weed control

➡ Or change the size of the safety zone

Safety  
zone
